Table of Contents

MICROBIOLOGICAL ASSAY IN PERSPECTIVE

Biological Assays in General
The Different Sorts of Microbiological Assay
The Basis of Calculation of Potency Estimates
Which Mathematical Model?

THE AGAR DIFFUSION ASSAY - ITS QUANTITATIVE BASIS

Historical Introduction
The Theory of Zone Formation
Principle of Calculation of Potency Estimate

THE THEORY AND PRACTICE OF TUBE ASSAYS FOR GROWTH PROMOTING SUBSTANCES

Introduction
The Mode of Action
Critical Factors in the Assay of Growth-Promoting Substances
Other Sources of Error

THE THEORY AND PRACTICE OF TUBE ASSAYS FOR GROWTH INHIBITING SUBSTANCES

Historical Introduction
Measurement of Response
The Form of Response Line
Historical Development of the Turbidimetric Method
Linearization of Sigmoid Curves
The Quantitative Theory of Microbial Inhibition
A Practically Determined Log Dose-Response Curve
Factors Affecting Final Cell Count
Summary and Conclusions

WHAT DO WE WANT OF AN ASSAY? HOW DO WE ATTAIN OUR GOAL?

Introduction
Pharmacopoeial Intention
Control of Antibiotic Bulk Materials
Control in Routine Manufacture
Research and Development

GENERAL PRACTICAL ASPECTS OF MICROBIOLOGICAL ASSAYS

Introduction
Inoculum
Test Solutions
Weighing
The Assay Medium
Selection of Latin Squares and the Plating Routine
Aseptic Techniques
Measuring Responses
Calculation of Potency Estimates and Confidence Limits

STANDARD REFERENCE MATERIALS

Historical Introduction
"Official" Reference Materials
National and Regional Reference Materials
In-House Standards

PRELIMINARY EVALUATION OF DATA

Introduction

Common Sense Inspection
Specific Tests for Abnormality
Detection of Outliers
Replacement of Missing Values
Summary and Conclusions

PARALLEL LINES ASSAYS - SOME DESIGNS AND THEIR EVALUATION

Introduction

A 3-Dose Level Assay Using Petri Dishes

A 3-Dose Level Assay for One Unknown Using a Large Plate and Latin Square Design

A 2-Dose Level Assay for Four Preparations [three unknowns] Using a Large Plate and 8 x 8 Latin Square Design

A 2-Dose Level Assay for Two Preparations [one unknown] Using a Large Plate and 8 x 8 Latin Square Design with Two Weighings of Each Preparation

A 4-Dose Level Turbidimetric Assay for One Unknown

A Small Plate Assay Using a 5-Dose Level Standard Curve

SLOPE RATIO ASSAYS, SOME DESIGNS AND THEIR EVALUATION

Introduction

Some Possible Designs

Preliminary Evaluation

General Statistical Procedures

The Procedure of Bliss

Evaluation of a 2-Dose Level Assay (1) Using the Bliss Procedure (2) The Procedure of the European Pharmacopoeia

CHOICE OF EXPERIMENTAL DESIGN

Introduction

Available Experimental Designs for Agar Diffusion Assays

Regulations and Options

Factors Influencing Width of Confidence Limits

Bias Due to Curvature of the Response Line

Non-Parallelism Due to Curvature

Choosing a Design for a Turbidimetric Growth Inhibiting Substance Assay

Choosing a Design for Turbidimetric Assay of Growth Promoting Substance

Summary and Conclusions
