

BioNMR in Drug Research, Volume 16

Oliver Zerbe (Editor), Raimund Mannhold (Series Editor), Hugo Kubinyi (Series Editor),
Gerd Folkers (Series Editor)

ISBN: 978-3-527-30465-3

Table of Contents

BASIC TECHNIQUES

Modern Methods for Expression of Proteins in Isotopically Enriched Form
Structure Calculation Using Automated Techniques
Achieving Better Sensitivity, Less Noise and Less Artifacts in NMR Spectra

NMR OF BIOMOLECULES

NMR Strategies for Protein Assignment
NMR of Membrane-Associated Peptides and Proteins
NMR of Nucleic Acids

MODERN SPECTROSCOPIC TECHNIQUES

Methods for the Measurement of Angle Restraints from Scalar and Dipolar Couplings
as well as from Cross Correlated Relaxation: Application to Biomolecules
Orientational Restraints
Scalar Coupling Across Hydrogen Bonds
TROSY: Transverse Relaxation-Optimized Spectroscopy
MAS Solid-State NMR of Isotopically Enriched Biological Samples
Determination of Protein Dynamics Using ¹⁵N Relaxation Measurements

**TOOLS FOR INVESTIGATION OF DRUG-RECEPTOR COMPLEXES AND FOR
LIGAND SCREENING**

The Determination of Equilibrium Dissociation Constants of Protein-Ligand Complexes
by NMR
Experiments in NMR-based Screening
The Use of Spin-Labels in NMR-supported Lead Finding and Optimization
NMR of Weakly Binding Ligands
Isotope Filter and Editing Techniques

STRATEGIES FOR DRUG DEVELOPMENT USING NMR

Strategies for NMR Screening and Library Design
Strategies for Hit Finding Using NMR
Strategies for Drug Discovery Using NMR
NMR-based Drug Design: Approaches for Very Large Proteins
