

Contents

I	Activities	1
1	Graphical Calculus	3
	Chalk toss	5
	Classroom walk	7
	Biking to school	9
	Raising a flag	11
	Library trip	13
	Airplane flight with constant velocity	15
	Projected image	21
	A formula for a piecewise-linear graph: Top-down analysis	25
	Water balloon	29
	Graphical estimation of slope	31
	Slope with rulers	35
	Examining linear velocity	37
	Given velocity graph, sketch distance graph	43
	Function-derivative pairs	49
	More airplane travel	51
	Dallas to Houston	53
	Water tank problem	55
	Tax rates and concavity	57
	Testing braking performance	59
	The start-up firm	61
	Graphical composition	63
	The leaky balloon	67
	Inverse function from graphs	69
2	Functions, Limits, and Continuity	73
	Introduction to functions	75
	Postage	79
	What's continuity	81
	Limits and continuity from a graph	83
	Slopes and difference quotients	85
	Sequences	87
	Can we fool Newton?	89

3	Derivatives	91
	Linear approximation	93
	Estimating cost	95
	Finite differences	97
	Using the derivative	99
	Gotcha	101
	Animal growth rates	103
	The product fund	105
	Exchange rates and the quotient rule	109
	Using the product rule to get the chain rule	111
	Magnification	113
4	Integration	115
	Time and speed	117
	Oil flow	119
	Can the car stop in time?	121
	Fundamental theorem of calculus	123
	Comparing integrals and series	125
	Graphical integration	129
	How big can an integral be?	131
	Numerical integration	133
	Verifying the parabolic rule	135
	Finding the average rate of inflation	137
	Cellular phones	139
	The shorter path	141
	The River Sine	143
5	Transcendental Functions	145
	Ferris wheel	147
	Why mathematicians use e^x	151
	Exponential differences	155
	Inverse functions and derivatives	157
	Fitting exponential curves	159
	Log-log plots	161
	Using scales	163
6	Differential Equations	165
	Direction fields	167
	Using direction fields	169
	Drawing solution curves	171
	The hot potato	173
	Spread of a rumor: discrete logistic growth	175
	Population	177
	Save the perch	179

7 Series	183
Convergence	185
Investigating series	187
Space station	189
Decimal of fortune	191
Approximating functions with polynomials	193
Introduction to power series	195
Graphs of polynomial approximations	197
Taylor series	201
Approximating logs	203
Using series to find indeterminate limits	205
Using power series to solve a differential equation	207
Second derivative test	209
Padé approximation	211
Using Taylor polynomials to approximate integrals	213
Complex power series	215
II Projects	219
Designing a roller coaster	221
Tidal flows	223
Designing a cruise control	227
Designing a detector	229
Taxes	231
Water evaporation	235
Mutual funds	237
Rescuing a satellite	239
Spread of a disease	241
Tax assessment	243
Dome support in a sports stadium	246
The fish pond	248
Drug dosage	250
Investigating series	253
Topographical maps	256
