Preface	<i>page</i> ix
Introduction	1

Part 1 Applications and foundations

1	<i>Signals and systems</i>	7
1.1	Signals and systems	8
1.2	Classification of signals	11
1.3	Classification of systems	16
2	<i>Mathematical prerequisites</i>	27
2.1	Complex numbers, polynomials and rational functions	28
2.2	Partial fraction expansions	35
2.3	Complex-valued functions	39
2.4	Sequences and series	45
2.5	Power series	51

Part 2 Fourier series

3	<i>Fourier series: definition and properties</i>	60
3.1	Trigonometric polynomials and series	61
3.2	Definition of Fourier series	65
3.3	The spectrum of periodic functions	71
3.4	Fourier series for some standard functions	72
3.5	Properties of Fourier series	76
3.6	Fourier cosine and Fourier sine series	80
4	<i>The fundamental theorem of Fourier series</i>	86
4.1	Bessel's inequality and Riemann–Lebesgue lemma	86
4.2	The fundamental theorem	89
4.3	Further properties of Fourier series	95
4.4	The sine integral and Gibbs' phenomenon	105

Cambridge University Press

978-0-521-53441-3 - Fourier and Laplace Transforms

R. J. Beerends, H. G. ter Morsche, J. C. van den Berg and E. M. van de Vrie

Table of Contents

[More information](#)

vi

Contents

5	<i>Applications of Fourier series</i>	113
5.1	Linear time-invariant systems with periodic input	114
5.2	Partial differential equations	122

Part 3 Fourier integrals and distributions

6	<i>Fourier integrals: definition and properties</i>	138
6.1	An intuitive derivation	138
6.2	The Fourier transform	140
6.3	Some standard Fourier transforms	144
6.4	Properties of the Fourier transform	149
6.5	Rapidly decreasing functions	156
6.6	Convolution	158
7	<i>The fundamental theorem of the Fourier integral</i>	164
7.1	The fundamental theorem	165
7.2	Consequences of the fundamental theorem	172
7.3	Poisson's summation formula*	181
8	<i>Distributions</i>	188
8.1	The problem of the delta function	189
8.2	Definition and examples of distributions	192
8.3	Derivatives of distributions	197
8.4	Multiplication and scaling of distributions	203
9	<i>The Fourier transform of distributions</i>	208
9.1	The Fourier transform of distributions: definition and examples	209
9.2	Properties of the Fourier transform	217
9.3	Convolution	221
10	<i>Applications of the Fourier integral</i>	229
10.1	The impulse response	230
10.2	The frequency response	234
10.3	Causal stable systems and differential equations	239
10.4	Boundary and initial value problems for partial differential equations	243

Part 4 Laplace transforms

11	<i>Complex functions</i>	253
11.1	Definition and examples	253
11.2	Continuity	256

Cambridge University Press

978-0-521-53441-3 - Fourier and Laplace Transforms

R. J. Beerends, H. G. ter Morsche, J. C. van den Berg and E. M. van de Vrie

Table of Contents

[More information](#)

<i>Contents</i>	vii
11.3 Differentiability	259
11.4 The Cauchy–Riemann equations*	263
12 <i>The Laplace transform: definition and properties</i>	267
12.1 Definition and existence of the Laplace transform	268
12.2 Linearity, shifting and scaling	275
12.3 Differentiation and integration	280
13 <i>Further properties, distributions, and the fundamental theorem</i>	288
13.1 Convolution	289
13.2 Initial and final value theorems	291
13.3 Periodic functions	294
13.4 Laplace transform of distributions	297
13.5 The inverse Laplace transform	303
14 <i>Applications of the Laplace transform</i>	310
14.1 Linear systems	311
14.2 Linear differential equations with constant coefficients	323
14.3 Systems of linear differential equations with constant coefficients	327
14.4 Partial differential equations	330
<hr/>	
Part 5 Discrete transforms	
15 <i>Sampling of continuous-time signals</i>	340
15.1 Discrete-time signals and sampling	340
15.2 Reconstruction of continuous-time signals	344
15.3 The sampling theorem	347
15.4 The aliasing problem*	351
16 <i>The discrete Fourier transform</i>	356
16.1 Introduction and definition of the discrete Fourier transform	356
16.2 Fundamental theorem of the discrete Fourier transform	362
16.3 Properties of the discrete Fourier transform	364
16.4 Cyclical convolution	368
17 <i>The Fast Fourier Transform</i>	375
17.1 The DFT as an operation on matrices	376
17.2 The N -point DFT with $N = 2^m$	380
17.3 Applications	383
18 <i>The z-transform</i>	391
18.1 Definition and convergence of the z -transform	392
18.2 Properties of the z -transform	396

Cambridge University Press

978-0-521-53441-3 - Fourier and Laplace Transforms

R. J. Beerends, H. G. ter Morsche, J. C. van den Berg and E. M. van de Vrie

Contents

18.3	The inverse z -transform of rational functions	400
18.4	Convolution	404
18.5	Fourier transform of non-periodic discrete-time signals	407
19	<i>Applications of discrete transforms</i>	412
19.1	The impulse response	413
19.2	The transfer function and the frequency response	419
19.3	LTD-systems described by difference equations	424
	Literature	429
	Tables of transforms and properties	432
	Index	444
