

Stress and health : biological and psychological interactions / William R. Lovallo. 3th. ed

ISBN: 9781483347448

Chapter 1: Psychosocial Models of Health and Disease

The Standard Biomedical Model and New Approaches to Medicine

A Biobehavioral Model of Disease and Treatment

Placebo Effects

Psychoneuroimmunology

Cultural, Intrapersonal, and Physiological Influences in Coronary Heart Disease

Psychosocial Theories of Disease and Treatment

The Foundation of Behavioral Medicine

Chapter 2: History of the Concept of Stress

The Age of Enlightenment and the Emergence of Scientific Thought

Descartes and the Mechanical Model of Living Things

The Worldview and Premises of Modern Science

The Mind-Body problem

Claude Bernard and the Modern Biomedical Model

Claude Bernard and the Vitalists

Walter Cannon

Definition of Stress

Hans Selye

The Concept of Allostasis

Additional Considerations on the Stress Concept

Chapter 3: Homeostatic Regulation: Normal Function and Stress Responses

A Hierarchy of Homeostatic Controls

Intrinsic Control Mechanisms

Autonomic Controls Over Homeostasis

Three Autonomic Divisions

Coordinated Actions of the Autonomic Branches

Higher Controls Over Homeostasis

The Hypothalamus and Emotional Expression

Endocrine Responses During Stress

Adrenomedullary Response

Adrenocortical Response

Negative Feedback by Cortisol

Cortisol During Stress

Beta-endorphin

Chapter 4: Physical and Psychological Stress

Classes of Stress Responses

The Exercise Response

Exercise and Adaptation to Stress

The Fight-or-Flight Response

Different Emotions and Motivations Accompany Exercise and the Fight–Flight Response

Why Is Exercise Considered Good If It Is a Stressor?

Psychological Stress

The Responses to Aversive and Nonaversive Challenges

Exposure to Noise and Shock

Activation and Distress

Chapter 5: Central Nervous System Integration of the Psychological Stress Response

Appraisals, Psychological Stress, and Negative Emotions

Primary and Secondary Appraisals

Outcomes of Coping Efforts and Physiological Responses

Central Integration of the Response to Psychological Stress

The Limbic System and Associated Parts of the Brain

Primary Appraisals: Sensory Intake and Interpretation of the Environment

What Is It? And Where Is It?

Cognition and Emotion: Generating Emotions Based on Appraisal Processes

Prefrontal-Limbic Interactions and Thoughts and Feelings

Secondary Appraisals: How Well Did Our Coping Attempt Work?

Physiological Correlates of Primary and Secondary Appraisal Processes

Internal Sources of Amygdaloid Activity and Internally Generated Emotional Responses

Initiation of Behavioral, Autonomic, and Neuroendocrine Responses to Psychological Stressors

Feedback to the Cortex and Limbic System: The Central Feedback Subsystem

Autonomic and Endocrine Outflow: The Emotional Response Subsystem

Chapter 6: Stress and the Endocrine System

Overview of Stress Endocrine Regulation

Activation of Stress Endocrine Secretion and the Central Corticotropin-Releasing Factor System

Cortisol's Feedback Actions in the Central Nervous System

Cortisol Effects on Frontal-Limbic Activity

Amygdala Responses to Cortisol and Altered Responsivity of the Central Nervous System

Amygdala Sensitization and Potential Implications for Health

The Hypothalamic-Sympatho-Adrenomedullary Axis

Stress Endocrine Secretion and Regulation of Long-Term Stress Reactivity

Hierarchy of Autonomic and Endocrine Controls Over Homeostasis Leading to Long-Term Memory Formation

Recap: How Ideas Come to Have Power Over Our Bodies

Chapter 7: The Immune System Stress and Behavior

Overview of the Immune System

Structural Components of the Immune System

Immune System Cells

Immune System Messengers

Innate Resistance

Acquired Immunity and Establishment of Immune System Memory

The Behavior-Immune Interface

Behavior-Immune Interactions and Health Indicators

Stress Buffers, Positive Emotions, and Physical Health

Chapter 8: Helplessness Coping and Health

Death Due to Uncontrollable Stress

Helplessness and Exposure to Uncontrollable Stress

Studies of Ulceration in Rats

“Learned Helplessness” and the Consequences of Lack of Control

Lazarus’s Model of Psychological Stress and Helplessness

Central Neurotransmitters and Severe Stress

Uncontrollable Shock, Norepinephrine, and Depression

Serotonin Mechanisms

Emotions and Health

Chapter 9: Genes, Stress, and Behavior

Early Life Experience, Epigenetic Programming of Gene Expression, and Stress Reactivity

A Rat Model of Early Experience, Development, and Responses to Stress

Maternal Separation and Neglect

Nurturing by Rat Mothers is Increased by Brief Separation

Genotype, Genetic Vulnerability to Early Life Adversity, and Psychobehavioral Outcomes in Humans

Chapter 10: Individual Differences in Reactivity to Stress

A Proposed Classification of Individual Differences in Reactivity

Persons May Differ in Stress Reactivity Because of Inborn Factors or Experience

Individual Differences in Stress Responses May be Conditioned by Functional Alterations at Three Levels in the System

Individual Differences in Evaluative and Emotional Processes—Level I

Individual Differences in Hypothalamic and Brainstem Responses to Stress—Level II

Individual Differences in Peripheral Responses to Stress—Level III

Chapter 11: Health Implications of Exaggerated and Blunted Stress Reactivity

Reactivity Tests in Medicine

Health Outcomes Related to Exaggerated Cardiovascular and Endocrine Reactivity

Individual Differences in Level I Reactivity and Health Implications

Individual Differences in Level II Reactivity: Cardiovascular Reactivity as a Mediator of Disease Risk

Individual Differences in Level III Reactivity and Disease

Blunted Stress Reactivity and Health

Early Life Adversity and Blunted Stress Reactivity

Early Life Adversity, Psychological Characteristics, Cognition, and Behavioral Regulation

Early Life Adversity and Low Versus High Stress Reactivity: Unanswered Questions

Blunted Stress Reactivity, Social Adversity, and Health

Discussion

Exaggerated Reactivity and Disease

Blunted Reactivity and Disease

Family Dysfunction, Socioeconomic Status, Neighborhood Characteristics, and Health Outcomes

Chapter 12: Behavior, Stress, and Health

The Historical Dilemma of Mind-Body Dualism

Matter and Behavior

Behavioral Medicine in Relation to Traditional Medicine

Systems Organization and Stress

Psychological Stress and Its Consequences

Stress and Behavioral Medicine

Stress, Stress Reduction, and Improved health
