Contents

Preface ix

1 **Introduction** 1
1.1 Historical background 1
1.2 Chaotic dynamics in Duffing's oscillator 3
1.3 Attractors and bifurcations 9

PART I BASIC CONCEPTS OF NONLINEAR DYNAMICS

2 **An overview of nonlinear phenomena** 15
2.1 Undamped, unforced linear oscillator 15
2.2 Undamped, unforced nonlinear oscillator 17
2.3 Damped, unforced linear oscillator 19
2.4 Damped, unforced nonlinear oscillator 20
2.5 Forced linear oscillator 21
2.6 Forced nonlinear oscillator: periodic attractors 23
2.7 Forced nonlinear oscillator: strange attractor 25

3 **Point attractors in autonomous systems** 27
3.1 The linear oscillator 27
3.2 Nonlinear pendulum oscillations 36
3.3 Evolving ecological systems 44
3.4 Competing point attractors 49

4 **Limit cycles in autonomous systems** 51
4.1 The single attractor 51
4.2 Limit cycle in a neural system 52
4.3 Bifurcations of a chemical oscillator 56
4.4 Multiple limit cycles in aeroelastic galloping 60
4.5 Topology of two-dimensional phase space 63

5 **Periodic attractors in driven oscillators** 65
5.1 The Poincaré map 65

5.2 Linear resonance 67
5.3 Nonlinear resonance 69
5.4 The smoothed variational equation 74
5.5 Variational equation for subharmonics 76
5.6 Domains of attraction by mapping techniques 77
5.7 Resonance of a self-exciting system 80

6 Chaotic attractors in forced oscillators 84
6.1 Relaxation oscillations and heartbeat 84
6.2 The Birkhoff–Shaw chaotic attractor 87
6.3 Systems with nonlinear restoring force 98

7 Stability and bifurcations of equilibria and cycles 108
7.1 Liapunov stability and structural stability 108
7.2 Centre manifold theorem 111
7.3 Local bifurcations of equilibrium paths 113
7.4 Local bifurcations of cycles 125
7.5 Prediction of incipient instability 128

PART II ITERATED MAPS AS DYNAMICAL SYSTEMS

8 Stability and bifurcation of maps 135
8.1 Introduction 135
8.2 Stability of one-dimensional maps 138
8.3 Bifurcations of one-dimensional maps 139
8.4 Stability of two-dimensional maps 150
8.5 Bifurcations of two-dimensional maps 158

9 Chaotic behaviour of one- and two-dimensional maps 162
9.1 General outline 162
9.2 Theory for one-dimensional maps 165
9.3 Bifurcations to chaos 170
9.4 Bifurcation diagram of one-dimensional maps 173
9.5 Hénon map 177

PART III FLOWS, OUTSTRUCTURES, AND CHAOS

10 The geometry of recurrence 187
10.1 Finite-dimensional dynamical systems 187
10.2 Types of recurrent behaviour 192
10.3 Hyperbolic stability types for equilibria 200
10.4 Hyperbolic stability types for limit cycles 206
10.5 Implications of hyperbolic structure 211

11 The Lorenz system 212
11.1 A model of thermal convection 212
11.2 First convective instability 215
11.3 The chaotic attractor of Lorenz 219
11.4 Geometry of a transition to chaos 227

12 Rössler's band 235
12.1 The simply folded band in an autonomous system 235
12.2 Return map and bifurcations 239
12.3 Smale's horseshoe map 245
12.4 Transverse homoclinic trajectories 251

13 Geometry of bifurcations 254
13.1 Local bifurcations 254
13.2 Global bifurcations in the phase plane 263
13.3 Bifurcations of chaotic attractors 272

PART IV APPLICATIONS IN THE PHYSICAL SCIENCES

14 Subharmonic resonances of an offshore structure 291
14.1 Basic equation and non-dimensional form 292
14.2 Analytical solution for each domain 294
14.3 Digital computer program 295
14.4 Resonance response curves 296
14.5 Effect of damping 301
14.6 Computed phase projections 302
14.7 Multiple solutions and domains of attraction 305

15 Chaotic motions of an impacting system 310
15.1 Resonance response curve 310
15.2 Application to moored vessels 314
15.3 Period-doubling and chaotic solutions 316

16 The particle accelerator and Hamiltonian dynamics 321
16.1 The physical model 322
16.2 The mathematical model 323
16.3 Resonance and Arnold diffusion 324
16.4 The standard map 327

17 Experimental observations of order and chaos 332
17.1 Introduction 332
17.2 Four nonlinear systems 333
17.3 Analysis of dynamical behaviour 335
17.4 Transition sequences 340
17.5 Discussion 347

References and Bibliography 350
