

CONTENTS

Preface	xiii
1 Basic Concepts of Nonlinear Dynamics	1
<i>J. M. T. Thompson</i>	
1.1 Introduction	1
1.2 Dynamical systems and the Poincaré section	1
1.3 Divergence, dissipation and recurrent behaviour	2
1.4 Point, periodic and quasi-periodic attractors	4
1.5 Saddles and repellers	7
1.6 Chaotic motion and its identification	7
1.7 Fractals and their dimensions	9
1.8 Basins and their boundaries	10
1.9 Controls, structural stability and bifurcation	11
1.10 Local bifurcations of equilibria and cycles	12
1.11 Homoclinic and heteroclinic global bifurcations	13
1.12 Bifurcational classification	17
References	19
PART I EXPERIMENTS	
2 Chaotic Dynamics and Fractals in Material Removal Processes	25
<i>F. C. Moon</i>	
2.1 Introduction	25
2.2 Fractals and material removal processes	27
2.3 Description of experimental studies	28
2.4 Fractal dimension of phase-space attractor	31
2.5 Nonlinear cutting dynamics models	32
References	36
3 Transfer of Energy from High-Frequency to Low-Frequency Modes	39
<i>A. H. Nayfeh, S. A. Nayfeh, T. A. Anderson and B. Balachandran</i>	
3.1 Introduction	39
3.2 Experiments on a parametrically excited cantilever beam	41
3.3 Experiments on an externally excited rod	45
3.4 A paradigm for the transfer of energy from high-frequency to low-frequency modes	50
3.5 Concluding remarks	57
References	57

4	Stability Measurements in Nonlinear Mechanical Experiments Guided by Dynamical Systems Theory	59
	<i>P. V. Bayly, L. N. Virgin, J. A. Gottwald and E. H. Dowell</i>	
4.1	Introduction	59
4.2	Overview of experiments	60
4.3	Characteristic multipliers of stable orbits near bifurcations	62
4.4	Characteristic multipliers of unstable orbits in chaotic attractors	66
4.5	Discussion	68
	References	69
5	Experimental Observation of Basins of Attraction and Homoclinic Bifurcation in a Magneto-Mechanical Oscillator	71
	<i>J. P. Cusumano and B. W. Kimble</i>	
5.1	Introduction	71
5.2	Description of the experimental system	73
5.3	Experimental basins of attraction	75
5.4	Evidence of homoclinic bifurcation	78
5.5	Global damping estimates using Liouville's theorem	80
5.6	Discussion and conclusions	83
	References	84
PART II IMPACT AND FRICTION		
6	Bifurcations in Impact Oscillators: Theory and Experiments	91
	<i>S. Foale and S. R. Bishop</i>	
6.1	Introduction	91
6.2	The impact oscillator model	92
6.3	Discontinuities in gradient from the COR model	92
6.4	Grazing bifurcations	94
6.5	Experimental investigations	96
6.6	Frequency sweeps with no stop	97
6.7	Frequency sweeps with impact	98
6.8	Comparison of experimental and theoretical results	99
	References	101
7	Stick-Slip Phenomena and Applications	103
	<i>Ch. Glocker and F. Pfeiffer</i>	
7.1	Introduction	103
7.2	Kinematics	104
7.3	Constrained motion	105
7.4	Contact laws	106
7.5	Turbine blade damper	108
	Appendix A	110
	Appendix B	111
	References	112
