Preface xi

Chapter 1 Feedback Control 1

1.1 The Mechanism of Feedback 1
1.2 Feedback Control Engineering 6
1.3 Control Theory Background 8
1.4 Scope and Organization of This Book 10
Notes 12
References 13

Chapter 2 State-Space Representation of Dynamic Systems 14

2.1 Mathematical Models 14
2.2 Physical Notion of System State 16
2.3 Block-Diagram Representations 25
2.4 Lagrange's Equations 29
2.5 Rigid Body Dynamics 33
2.6 Aerodynamics 40
2.7 Chemical and Energy Processes 45
Problems 52
Notes 55
References 56

Chapter 3 Dynamics of Linear Systems 58

3.1 Differential Equations Revisited 58
3.2 Solution of Linear Differential Equations in State-Space Form 59
3.3 Interpretation and Properties of the State-Transition Matrix 65
3.4 Solution by the Laplace Transform: The Resolvent 68

3.5 Input-Output Relations: Transfer Functions 75
3.6 Transformation of State Variables 84
3.7 State-Space Representation of Transfer Functions: Canonical Forms 88
Problems 107
Notes 109
References 111

Chapter 4 Frequency-Domain Analysis 112
4.1 Status of Frequency-Domain Methods 112
4.2 Frequency-Domain Characterization of Dynamic Behavior 113
4.3 Block-Diagram Algebra 116
4.4 Stability 124
4.5 Routh-Hurwitz Stability Algorithms 128
4.6 Graphical Methods 133
4.7 Steady State Responses: System Type 156
4.8 Dynamic Response: Bandwidth 161
4.9 Robustness and Stability (Gain and Phase) Margins 169
4.10 Multivariable Systems: Nyquist Diagram and Singular Values 174
Problems 184
Notes 187
References 189

Chapter 5 Controllability and Observability 190
5.1 Introduction 190
5.2 Where Do Uncontrollable or Unobservable Systems Arise? 194
5.3 Definitions and Conditions for Controllability and Observability 203
5.4 Algebraic Conditions for Controllability and Observability 209
5.5 Disturbances and Tracking Systems: Exogenous Variables 216
Problems 218
Notes 219
References 221

Chapter 6 Shaping the Dynamic Response 222
6.1 Introduction 222
6.2 Design of Regulators for Single-Input, Single-Output Systems 224
6.3 Multiple-Input Systems 234
6.4 Disturbances and Tracking Systems: Exogenous Variables 236
6.5 Where Should the Closed-Loop Poles Be Placed? 243
Problems 254
Notes 257
References 258

UNIVERSIDAD NACIONAL DE ENTRE RIOS
FACULTAD DE INGENIERIA

BIBLIOTECA

Chapter 7 Linear Observers 259
7.1 The Need for Observers 259
7.2 Structure and Properties of Observers 260
7.3 Pole-Placement for Single-Output Systems 263
7.4 Disturbances and Tracking Systems: Exogenous Variables 267
7.5 Reduced-Order Observers 276
Problems 287
Notes 288
References 289

Chapter 8 Compensator Design by the Separation Principle 290
8.1 The Separation Principle 290
8.2 Compensators Designed Using Full-Order Observers 291
8.3 Reduced-Order Observers 298
8.4 Robustness: Effects of Modeling Errors 301
8.5 Disturbances and Tracking Systems: Exogenous Variables 310
8.6 Selecting Observer Dynamics: Robust Observers 314
8.7 Summary of Design Process 326
Problems 332
Notes 335
References 336

Chapter 9 Linear, Quadratic Optimum Control 337
9.1 Why Optimum Control? 337
9.2 Formulation of the Optimum Control Problem 338
9.3 Quadratic Integrals and Matrix Differential Equations 341
9.4 The Optimum Gain Matrix 343
9.5 The Steady State Solution 345
9.6 Disturbances and Reference Inputs: Exogenous Variables 350
9.7 General Performance Integral 364
9.8 Weighting of Performance at Terminal Time 365
Problems 369
Notes 375
References 377

Chapter 10 Random Processes 378
10.1 Introduction 378
10.2 Conceptual Models for Random Processes 379
10.3 Statistical Characteristics of Random Processes 381
10.4 Power Spectral Density Function 384
10.5 White Noise and Linear System Response 386
10.6 Spectral Factorization 393
10.7 Systems with State-Space Representation 396
10.8 The Wiener Process and Other Integrals of Stationary Processes 404

Problems 407
Notes 408
References 409

Chapter 11 Kalman Filters: Optimum Observers 411

11.1 Background 411
11.2 The Kalman Filter is an Observer 412
11.3 Kalman Filter Gain and Variance Equations 414
11.4 Steady State Kalman Filter 417
11.5 The "Innovations" Process 425
11.6 Reduced-Order Filters and Correlated Noise 427
11.7 Stochastic Control: The Separation Theorem 442
11.8 Choosing Noise for Robust Control 455
Problems 461
Notes 468
References 469

Appendix Matrix Algebra and Analysis 471
Bibliography 498
Index of Applications 503
Index 506
