Part 1 Introduction to Magnetism

1.	Preliminary Remarks on Physical Principles	13
1.1.	Introduction	13
1.2.	A Brief Excursion into Atomic Physics	13
1.3.	Ferromagnetic Metals	14
1.4.	Ferromagnetic Domains and Domain Walls	15
1.5.	Elementary Processes of Magnetization	18
1.6.	Bitter Patterns, Spikelike Domains, and Tree Patterns	20
1.7.	Imperfections, Internal Stresses, Non-magnetic Inclusions, Grain Boundaries	22
1.8.	Texture and Magnetic Anisotropies	26
2.	Magnetic Terms and Definitions	29
3.	Survey of Magnetic Materials	42
3.1.	Preliminary Remarks	42
3.2.	Range of Values of Magnetic Materials	42
3.3.	Extreme Values of Magnetic Properties	46
3.4.	Metals and Ferrites	46
3.5.	Powder (Dust) Cores	48
3.6.	Thin Magnetic Films. Plated Wires	48
3.7.	Amorphous Soft Magnetic Alloys (Metallic Glasses)	49
3.8.	Remarks on Superconductors	51
3.9.	Classification of Magnetic Materials	51
3.10.	Survey of Core Forms and other Forms in Practical use as well as Inductive Components made from Soft Magnetic Materials	54
4.	The Magnetic Circuit. Formulae for Calculating Magnetic and Electrical Quantities	60
4.1.	General	60
4.2.	The Magnetic Circuit	60
4.2.1.	Closed Magnetic Circuit	60
4.2.2.	Open Magnetic Circuit (Effect of Air Gap, Shearing)	60
4.3.	Magnetic Shape Characteristics of Cores	64
4.4.	Formulae for Calculation of Some Important Magnetic and Electrical Quantities	66
4.4.1.	Alternating Magnetization	66

4.4.2.	Pulse Magnetization, Switching Performance	76
4.5.	Direct-Current Pre-Magnetization, Direct-Current Pre-loadability	78
5.	Magnetic Quantities and Units	81
6.	Magnetization Conditions, Methods of Measurement	85
6.1.	Magnetization Conditions and their Effect on the Characteristic Curves	85
6.1.1.	Concepts and Explanations	85
6.1.2.	Static (DC) Magnetization	87
6.1.3.	Alternating (AC) Magnetization	87
6.1.4.	Mixed Magnetization	91
6.1.5.	Pulse Magnetization	93
6.2.	Methods of Measurement	96
6.2.1.	Notes on the Determination of Field Strength and Flux Density	96
6.2.2.	Continuous (DC) Field Measurement Methods	97
6.2.3.	Alternating (AC) Field Measurement Methods	98
6.2.4.	Pulse Measurement Methods	103
6.2.5.	Shielding Measurement Methods	105
6.2.6.	Effect of Neutralization	106
7.	Relevant DIN Standards and IEC Publications	108
8.	Literature	114
8.1.	Textbooks	114
8.2.	Technical and Scientific Publications of VAC in the Area of Magnetism (from 1950)	115
Part 2 Our Materials and their Applications		
9.	Survey of the VAC Alloy Programme	125
9.1.	Nickel-Iron Alloys with 72-83% Nickel	125
9.2.	Nickel-Iron Alloys with 54-68% Nickel	128
9.3.	Nickel-Iron Alloys with 45-50% Nickel	129
9.4.	Nickel-Iron Alloys with 35-40% Nickel	131
9.5.	Nickel-Iron Alloy with 30% Nickel	132
9.6.	Silicon-Iron Materials	133
9.7.	VACOFER (Ultrapure Magnetic Iron)	134
9.8.	Cobalt Iron	135
9.9.	Aluminium-Iron Alloys	137
10.	Forms of Supply	138
10.1	Summary	138
10.2.	Strip-Wound Cores	138

10.2.1.	Toroidal Strip-Wound Cores, Ranges of Dimensions	138
10.2.2.	Fixing Protective Boxes	138
10.2.3.	Series of Types	145
10.2.4.	Special Shape of Strip-Wound Cores	150
10.3.	Strip-Wound Cut Cores	151
10.3.1.	Design, Materials	151
10.3.2.	Core Forms	151
10.3.3.	Type Series	154
10.3.4.	Accessory Parts, Building Kits	158
10.3.5.	Temperature Performance	160
10.4.	Laminations, Stampings	161
10.4.1.	General	161
10.4.2.	Type Series for Core Laminations	162
10.4.3.	Special Forms	166
10.5.	Glued Lamination Packets, EK Cores	166
10.5.1.	Survey	166
10.5.2.	Type Series for EK Cores	167
10.5.3.	Accessory Parts, Mounting Units	169
10.6.	Magnetic Shields	170
10.6.1.	Preliminary Remarks	170
10.6.2.	Type Series for Shielding Cans	170
10.6.3.	Flexible Magnetic Shielding Tubes	173
10.6.4.	Magnetic Shielding Foils	174
10.6.5.	Shields for Special Applications	174
10.7.	Moulded and Solid Parts	176
10.7.1.	Materials and Production Processes	176
10.7.2.	Moulded Sintered Parts	177
10.8.	Inductive Components	179
10.8.1.	Survey, Series of Types	179
10.8.2.	Special Forms, Modules, Sets of Components	182
10.9.	Semi-Finished Products	183
10.9.1.	Tapes and Strips	184
10.9.2.	Forms of Supply of other Semi-finished Articles	185
10.10.	Coding	185
10.11.	Appendix: Calculated Form Parameters and Core Constants for our Leading Core Type Series	188
11.	Notes on the Further Processing of Semi-finished Products, Heat Treatments	198
11.1.	Notes on Further Processing	198
11.2.	Heat Treatments	200
12.	Properties and Characteristic curves	204
12.1.	Introduction	204
12.2.	Principal Tables	206
12.3.	Static Properties of Solid Material and Formed Parts	212

12.4.	Properties of Strip-Wound Cores with Alternating Magnetization	217
12.4.1.	Magnetization Curves and Hysteresis Loops	218
12.4.2.	Component Representation of the Magnetization Curves	231
12.4.3.	Magnetization Reversal Losses (Total Losses)	237
12.4.4.	Frequency Dependence of Permeability	243
12.4.5.	Properties in the Case of Direct-Current Pre-magnetization	245
12.5.	Properties of Strip-Wound Cores in the Case of Pulse Magnetization	251
12.5.1.	General	251
12.5.2.	Pulse Loops and Magnetization Curves	251
12.5.3.	Pulse Permeability	253
12.5.4.	Pulse Losses (Magnetization Reversal Losses with Unipolar Magnetization)	254
12.5.5.	Switching Properties of Miniature Strip-wound cores	256
12.6.	Temperature Dependence of Magnetic Properties (Strip-wound Cores)	259
12.6.1.	Explanatory Remarks	259
12.6.2.	Permeability	260
12.6.3.	Saturation and Hysteresis Loops	263
12.7.	Properties of Strip-Wound Cut Cores (C-Cores)	265
12.7.1.	Magnetization Curves, Permeability, Hysteresis Loops	265
12.7.2.	Magnetization Reversal (Total) Losses	268
12.7.3.	Pulse Properties	273
12.7.4.	Magnetic Pre-loadability	274
12.8.	Properties of Core Laminations	274
12.8.1.	Magnetization Curves	276
12.8.2.	Complex Permeability	279
12.8.3.	Hysteresis Coefficient, Losses	280
12.9.	Properties of Glued Lamination Packets, in Particular EK-cores	283
12.9.1.	Magnetization Curves, Coercivity	283
12.9.2.	Magnetic Pre-loadability, A_L -Curves	284
12.9.3.	Magnetization Reversal (Total) Losses	286
12.10.	Properties of Magnetic Shields	288
12.10.1.	Explanatory Remarks, Approximation Formulae	288
12.10.2.	Characteristic Curves for Shields	289
12.11.	Special Properties of Magnetic and Other Materials	292
12.11.1.	Magnetic Materials with High Wear Resistance and Hardness (RECOVAC, VACODUR)	292
12.11.2.	Elastic Properties of Magnetic Materials for Springs	294
12.11.3.	Materials for Temperature Compensation (THERMOFLUX)	294
12.11.4.	Materials for Ultrasonic Applications, Magnetostriction	296
12.11.5.	Materials for Mechanical Filters and Delay Lines	298
12.11.6.	Magnetic and Physical Properties of Glass-to-Metal Sealing Alloys	300
12.11.7.	Magnetically Semi-hard Materials (VACUZET)	301

12.11.8.	Brief Survey of Permanent Magnets	304
13.	Aspects of the Choice of Material, Strip Thickness and Form of Supply	306
13.1.	Choice of Alloy	306
13.1.1.	Important Magnetic Properties	306
13.1.2.	Important Mechanical and Technological Properties	308
13.2.	Choice of Strip Thickness	309
13.2.1.	High Permeability at Higher Frequencies	309
13.2.2.	Low Magnetization Reversal Losses in the Medium Frequency Range	311
13.3.	Choice of Form of Supply	311
13.3.1.	Mechanical Stability of Various Types of Core and Forms of Supply	311
13.3.2.	Effects of Various Mechanical Stresses on Magnetic Properties	312
13.4.	Environmental Effects	315
13.4.1.	Climatic, Mechanical and other Requirements	315
13.4.2.	Corrosion Resistance of our Alloys	317
13.4.3.	Effect of Radioactive Radiation	318
14.	Magnetic Qualities	321
14.1.	General	321
14.2.	Statistical Quality Control	322
14.3.	Some Remarks on the Magnetic Qualities of our Main Products	323
14.4.	Magnetic Qualities (Tables)	325
14.4.1.	Toroidal Strip-Wound Cores	325
14.4.2.	Strip-Wound Cut Cores	330
14.4.3.	Core Laminations	332
14.4.4.	EK-Cores	338
14.4.5.	Magnetic Shields	341
14.4.6.	Moulded and Solid Parts	342
14.5.	Ordering Examples	343
15.	Index and Notes	345
15.1.	Index of Key Terms	345
15.2.	List of Printed Literature	350
15.3.	Products of VAC	352
15.4.	Worldwide Agencies	352
