

I. ELECTRICAL ENGINEERING FUNDAMENTALS

1. Units of Measurements

1.1. Measurements systems	1
1.2. Electric and magnetic units	3
1.3. Conversion factors	4

2. Properties of Matter

2.1. Structure of matter	18
2.2. Radioactivity	24
2.2.1. Definition of concepts	24
2.2.2. Radioactive decay	24
2.2.3. Laws governing radioactive decay	26
2.2.4. Natural radioactivity	27
2.2.5. Artificial radioactivity	28
2.2.6. Radiation protection	29
2.3. Chemical concepts and physical constants	38
2.4. Constants of materials	39
2.5. Magnetic materials	44
2.6. Insulating materials	48
2.7. Metallic electric conductors	58
2.8. Ionic electric conductors	60
2.9. Electronic semiconductors	64
2.9.1. Main definitions	64
2.9.2. Hall generators	69
2.9.3. Components with Hall generators	85
2.9.4. Field plates	87
2.10. Acoustics	93
2.10.1. Main definitions	93
2.10.2. Quantities and formulae of practical importance in acoustics	95
2.10.3. Sound intensity, loudness level, loudness, sound level, sound spectrum	99
2.11. Frequency ranges of oscillations	104

3. Calculation Methods in Electrotechnology

3.1. Mathematical formulae	106
3.1.1. Approximation formulae for circular, hyperbolic and exponential functions and binomical series	106
3.1.2. Finite and infinite series	108
3.1.3. Determinants	121
3.1.4. Matrices	124

3.1.5.	Numerical approximation methods	128
3.1.6.	Laplace transformation	134
3.2.	Plane potential fields without source.	135
3.3.	Rules regarding sign and direction.	143
3.4.	Complex quantities in alternating current calculations	146
3.5.	Locus curves	150
3.6.	Passive two-port networks	154
3.7.	Parameters of a homogeneous line	157
3.8.	Component systems	161
4.	Electric and Magnetic Quantities	
4.	Glossary of Terms and Definitions	165
II.	ELECTRICAL POWER ENGINEERING	
5.	Power stations	
5.1.	Steam and heat rates	201
5.2.	Steam generation with fossil fuels	214
5.3.	Steam turbines	226
5.4.	Data for calculation values of components and materials	234
5.5.	Nuclear steam generation	268
5.6.	Hydro-electric installations	282
5.6.1.	Designs of hydro-electric installations	282
5.6.2.	Machinery and electrical equipment	283
5.6.3.	Preparatory work on site	292
6.	Synchronous machines	
6.1.	Operating characteristics	295
6.2.	Reactances of synchronous machines	297
6.3.	Time constants of synchronous machines	306
6.4.	Voltage characteristic and voltage control	309
7.	Electric motors	
7.1.	Motor designs and protection	315
7.2.	Maximum temperature rise	316
7.3.	Heat transfer	319
7.4.	Cooling of electric machines	324
7.4.1.	The required flow of cooling medium for machines cooled internally	324
7.4.2.	Temperature rise	325
7.4.3.	Thermal conductivity	329
7.5.	Torque, power and current input	330
7.6.	Motor starting characteristics	336
7.7.	Operating values for electric motors	342
7.8.	Behaviour of the motor under abnormal operating conditions	345

8. Electrical power distribution

8.1. Network parameters and characteristic values	347
8.2. Short-circuit currents in three-phase systems	358
8.2.1. Calculation of short-circuit currents	358
8.2.2. Thermal stresses due to short-circuit current	369
8.2.3. Mechanical stress due to the short-circuit current	383
8.3. Power system protection	398
8.4. Transformers	414
8.5. Static converters	428
8.6. Capacitors	447
8.7. Power cables	454
8.8. Overhead transmission lines	479
8.8.1. Mechanical characteristics	479
8.8.2. Electrical characteristics	496
8.9. Electric wiring	514

9. Circuit Breakers and Measuring Instruments

9.1. Low voltage switchgear	526
9.2. High voltage switchgear	535
9.2.1. Circuit breakers	535
9.2.2. Load disconnecting switches	541
9.2.3. Isolating switches	541
9.2.4. High voltage high rupturing capacity fuses	542
9.2.5. Overvoltage protection equipment	545
9.3. Electric measuring instruments	547
9.4. Instrument transformers and electricity meters	552
9.4.1. Current and voltage transformers	552
9.4.2. Electricity meters	556

III. POWER ENGINEERING APPLICATIONS**10. Electric Traction**

10.1. General data	563
10.2. Tractive units	570
10.3. Railway substations	581
10.4. Overhead line systems	582

11. Industrial Electric Heating

11.1. Electric arc furnaces and induction furnaces	590
11.2. Induction heating	591
11.3. Dielectric heat treatment	598
11.4. Electric welding	600
11.4.1. Arc welding	600
11.4.2. Resistance welding	609
11.4.3. Special electric welding processes	621

12. Electrochemistry

12.1. Electroplating engineering	626
12.2. Various electrochemical processes	627
12.3. Fuel cells	630
12.4. Storage batteries	638

13. Some Other Applications

13.1. Lighting engineering	641
13.2. Industrial ventilating engineering	649
13.2.1. Ventilation equipment	649
13.2.2. Ventilator principles and concepts	654
13.2.3. Choice of ventilator	658
13.3. Fluid pumps and pipes	667
13.4. Domestic electrical appliances	673

IV. CONTROL ENGINEERING AND AUTOMATION**14. Control-Systems**

14.1. Basic concepts of control engineering	679
14.2. Properties of transfer elements	680
14.3. Definitions of controlled sections	685
14.4. Control devices	687
14.5. Control chain and control loop	689

15. Electronic Circuit Systems for Data Processing

15.1. Signals as information carriers	693
15.2. Number systems	695
15.2.1. Decimal and dual number system	695
15.2.2. Computation with dual numbers	697
15.2.3. Number conversion decimal to dual and vice versa	698
15.3. Codes	699
15.4. Basic functions of electronic circuitry	703
15.5. Circuit algebra	707
15.6. Switching symbols in electronic switching systems	708

16. Applications of Control Engineering

16.1. Numerical control	712
16.2. Transistorized control systems in the field of motive and power engineering	714
16.2.1. Basic structure and applications	714
16.2.2. Transistorized B modules for analog control systems	721
16.2.3. Circuitry of the controlling amplifiers, characteristics of the automatic controller	727
16.2.4. Optimization	735
