## CONTENTS

LIST OF CONTRIBUTORS	xi
PREFACE TO VOLUME II	xiii
CONTENTS OF OTHER VOLUMES	xvii
Chapter 1 <b>Morphogenesis</b>	
<i>Robert Rosen</i>	
I. Introduction	1
II. Morphogenetic Movements	4
A. Subunits and Subunit Assemblies	4
B. Prerequisites for Self-Assembly	7
C. The Efficiency of Subassembly Processes	8
III. Kinetic and Geometric Aspects of Self-Assembly	15
A. Spherical and Helical Viruses	15
B. "Sorting Out" in Mixed Cell Populations	30
IV. Differentiation	56
A. Assymetries and Their Generation	56
B. Rashevsky's Model for Cell Polarities	59
C. The Turing Models	61
D. The Keller-Segel Models	70
E. Morphogenesis and Epigenesis	74
General References	76

**Chapter 2 Mechanics of Epigenetic Control***Robert Rosen*

I.	Introduction	79
II.	Regulatory Behavior in Open Chemical Systems	83
III.	Parametric Changes in Open Chemical Systems	91
IV.	Reaction Rate Control in Catalyzed Open Systems	98
	A. Uncatalyzed Reactions	100
	B. Catalyzed Reactions	102
	C. Activation and Inhibition of Catalyzed Reactions	108
V.	Examples of Epigenetic Controls	115
	A. Rate Control in Enzyme Systems	115
	B. Rate Control of Genetic Catalysis	120
VI.	Some Specific Epigenetic Circuits	124
	A. "Discrimination Network"	135
	B. "Learning Network"	136
	C. "Size Regulation Network"	137
	Notes	137
	General References	139

**Chapter 3 Automata Theory in the Context of Theoretical Embryology***Michael A. Arbib*

I.	Programs in Biological Systems	142
II.	Positional Information	149
III.	Relative Position and Synchronization in Arrays of Automata	157
	A. Synchronization of Arrays of Automata	157
	B. Relative Position—A Slightly Embryological View	165
IV.	An Introduction to Turing Machines and Formal Languages	169
	A. Turing Machines	169
	B. Biological String Processing	178
	C. Formal Languages	180
	D. Tessellation Automata	186
V.	Automata Which Construct as Well as Compute	188
	A. Self-Reproducing Automata	188
	B. Modified Modules for Greater Biological Relevance	197
VI.	Evolution and Entropy	204
	References	212

## Chapter 4 **Some Relational Cell Models: The Metabolism–Repair Systems**

*Robert Rosen*

I.	Introduction	217
II.	General Input–Output Systems	220
	A. Components and Component Networks	220
	B. Some Examples of Input–Output Systems	223
	C. Dependency Structure in Block Diagrams	226
	D. The Roles of Time in General Input–Output Systems	227
III.	Theory of a Single Metabolism–Repair System	229
	A. The Basic Idea of Metabolism–Repair Systems	229
	B. The Conversion of Input–Output Systems to Metabolism–Repair Systems	230
	C. The Dependency Structure of Metabolism–Repair Systems	232
	D. Replication of Repair Components	234
IV.	Global Theory of Metabolism–Repair Systems	236
	A. The Theory of Categories	236
	B. Metabolism–Repair Systems in Arbitrary Categories	241
	C. The Behavior of Abstract Metabolism–Repair Systems in Changing Environments	244
	D. The Problem of Control and Reversibility in Metabolism–Repair Systems	246
V.	Structural and Relational Models Compared	248
	General References	252

## Chapter 5 **Compartments**

*Aldo Rescigno and James S. Beck*

I.	The Concept of Compartment	255
	A. Physiology	255
	B. Pharmacology	257
	C. Tracer Kinetics	260
II.	General System Properties	262
	A. Definition of a System	262
	B. Linear Systems	263
	C. State-Determined Systems	264
	D. Holonomic Systems	265
III.	Systems of Compartments	267
	A. The Operational Definition of a Compartment	267
	B. Pools versus Compartments	269
	C. Classification of Systems	271
	D. Topological Properties	272

IV. Integration of the System Equations	274
A. The Operational Calculus of Mikusinski	275
B. Differential Equations in Operational Notation	278
C. The Flow Graph	281
D. Partial Fraction Expansion	285
E. The Operational Form of Some Simple Functions	287
F. The Algebraic Derivative of an Operator	288
G. The Operational Form of Other Trigonometric Functions	290
H. The Transfer Function	292
V. Analysis of the Precursor-Successor Relationship	300
VI. Material Transport through Compartments	302
A. Turnover	306
B. Graphs and Turnover	311
VII. Noncompartmented Systems	312
VIII. Dimensional Analysis of the System Equations	315
IX. The Use and Abuse of Compartment Analysis	317
General References	321
AUTHOR INDEX	323
SUBJECT INDEX	326
