

Contents

Chapter 1	
Physical Principles of Circulation	1
1.1 The Conservation Laws	1
1.2 The Forces that Drive or Resist Blood Flow	2
1.3 Newton's Law of Motion Applied to a Fluid	3
1.4 The Importance of Turbulence	6
1.5 Deceleration as a Generator of Pressure Gradient	7
1.6 Pressure and Flow in Blood Vessels—Generalized Bernoulli's Equation	8
1.7 Analysis of Total Peripheral Flow Resistance	10
1.8 The Importance of Blood Rheology	12
1.9 The Mechanics of Circulation	13
1.10 A Little Bit of History	13
1.11 The Energy Balance Equation	15
References	21
Chapter 2	
The Heart	22
2.1 Introduction	22
2.2 The Geometry and Materials of the Heart	26
2.3 The Electric System	29
2.4 Mechanical Events in a Cardiac Cycle	33
2.5 How Are the Heart Valves Operated?	39
2.6 Fluid Mechanics of the Heart	47
2.7 The Heart Muscle	50
2.8 Stresses in the Heart Wall	53
2.9 The Need for a New Hypothesis for Residual Stress Distribution	54
2.10 The Principle of Optimal Operation	64
2.11 Consequences of Our New Hypothesis	65
2.12 Embedding Muscle Fibers in a Continuum	68
References	73

Chapter 3	
Blood Flow in Arteries	77
3.1 Introduction	77
3.2 Laminar Flow in a Channel or Tube	82
3.3 Applications of Poiseuille's Formula: Optimum Design of Blood Vessel Bifurcation	86
3.4 Steady Laminar Flow in an Elastic Tube	91
3.5 Turbulent Flow in a Tube	95
3.6 Turbulence in Pulsatile Blood Flow	97
3.7 The Frequency Parameter of Pulsatile Flow	100
3.8 Wave Propagation in Blood Vessels	104
3.9 Progressive Waves Superposed on a Steady Flow	115
3.10 Nonlinear Wave Propagation	117
3.11 Reflection and Transmission of Waves at Junctions	118
3.12 Effect of Frequency on the Pressure–Flow Relationship at Any Point in an Arterial Tree	127
3.13 Pressure and Velocity Waves in Large Arteries	132
3.14 The Effects of Geometric Nonuniformity	134
3.15 The Effects of Viscosity of the Fluid and Viscoelasticity of the Wall	144
3.16 The Influence of Nonlinearities	147
3.17 Flow Separation from the Wall	153
3.18 Messages Carried in the Arterial Pulse Waves and Clinical Applications	156
References	157
Chapter 4	
The Veins	166
4.1 Introduction	166
4.2 The Concept of Elastic Instability	168
4.3 Instability of a Circular Cylindrical Tube Subjected to External Pressure	173
4.4 Vessels of Naturally Elliptic Cross Section	183
4.5 Steady Flow in Collapsible Tubes	186
4.6 Unsteady Flow in Veins	194
4.7 Effect of Muscle Action on Venous Flow	201
4.8 Flutter	202
4.9 Patency of Pulmonary Veins When the Blood Pressure Is Exceeded by Airway Pressure	209
4.10 Waterfall Condition in the Lung	218
References	219
Chapter 5	
Microcirculation	224
5.1 Introduction	224
5.2 Anatomy of Microvascular Beds	225
5.3 Pressure Distribution in Microvessels	233
5.4 Pressure in the Interstitial Space	237
5.5 Velocity Distribution in Microvessels	238
5.6 The Velocity–Hematocrit Relationship	241
5.7 Mechanics of Flow at Very Low Reynolds Numbers	249
5.8 Oseen's Approximation and Other Developments	257

5.9	Entry Flow, Bolus Flow, and Other Examples	259
5.10	Interaction between Particles and Tube Wall	263
5.11	Force of Interaction of Leucocytes and Vascular Endothelium	268
5.12	Local Control of Blood Flow	278
	References	285

Chapter 6

	Blood Flow in the Lung	290
6.1	Introduction	290
6.2	Pulmonary Blood Vessels	292
6.3	Pulmonary Capillaries	295
6.4	Elasticity of Pulmonary Arteries and Veins	302
6.5	Elasticity of the Pulmonary Alveolar Sheet	306
6.6	Apparent Viscosity of Blood in Pulmonary Capillaries	309
6.7	Formulation of the Analytical Problems	313
6.8	An Elementary Analog of the Theory	318
6.9	General Features of the Sheet Flow	322
6.10	Pressure–Flow Relationship of the Pulmonary Alveolar Blood Flow	329
6.11	Blood Flow in Whole Lung	333
6.12	Regional Difference of Pulmonary Blood Flow	345
6.13	The “Sluicing” Condition when $p_{\text{ven}} < p_A$	347
6.14	Distribution of Transit Time in the Lung	354
6.15	Other Investigations	360
	References	364

Appendix

	Basic Field Equations	370
A.1	Introduction	370
A.2	Conservation of Mass and Momentum	370
A.3	Navier–Stokes Equations for an Incompressible Newtonian Fluid	373
A.4	Navier’s Equation for an Isotropic Hookean Elastic Solid	374
A.5	Fundamental Equations of Hemodynamics	376
A.6	Dynamic Similarity and Reynolds Number	378
A.7	Basic Equations for an Elastic Solid	380
A.8	Viscoelastic Bodies	382
A.9	Cylindrical Polar Coordinates	383
A.10	Turbulent Flow	387
	References	390
